

We developed and implemented a state-of-the-art-operating model for a wind power developer

Fortos developed and implemented an Operating Model for large-scale wind power projects for a wind power developer, including strategy, processes and implementation.

Client Challenge

The renewable energy sector is experiencing surging demand for expansion of new wind power across the Nordics. With wind power projects growing larger in scale, wind power developers' traditional organizational structures and processes are challenged.

There is increased pressure on the project organization to follow-up contractors, deal with changes and manage risks. New ways to organize and collaborate are required to be able to cope with the more complex nature of managing wind power projects.

Client Solution

A new operating model was developed and tailored based on a large-scale, ongoing project. The new operating model included:

- Organizational structure with detailed roles, mandates, governance structure, reporting processes and information flows
- Processes to manage risk, changes, and activities
- The operating model was consolidated and generalized into an actionable and hands-on Project Execution Plan. It was subsequently possible to implement the execution plan on new wind power projects, independent of scale.

Client Value

Fortos supported the client in the development of a state-of-the-art operating model for large wind power projects. Fortos' consultants ensured that the projects were delivered on time and on par with quality and cost targets, whilst improving the client's competitiveness as a world leading wind power developer.

It was subsequently possible to reuse the project materials and structure to add value to forthcoming projects as well to benefit all the customer's operations.

Collaboration between Client & Fortos

Several workshops and meetings were arranged in the development of the new operating model. The receiving organization was engaged throughout the process to ensure ownership of the material.

Fortos assisted the project organization in implementing the new operating model and served as advisors in the hand-over to the line organization.
